CC AAW4862B-AAW48645), comprising a membrane translocation domain (AAW48620-AW48627 or AAW48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAW48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding comain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkRppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or concer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory compounds are used lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease; act also cusful for treating pro-inflammatory responses such as allergies, cusful for treating pro-inflammatory responses such as allergies, cusful for treating and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclarotic; antiallergic; membrane translocation domain; NEMO binding domain; eczeme; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                    The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzhaimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NPkB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection;
                                      New compound for diagnosing or treating inflammatory disorders, e.g. asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease or cancer, comprises a membrane translocation domain and a NEMO binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an antiinflammatory compound (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

                                                                                                                                                                                                                                                                                                                                                                                   셤
                                   The invention relates to an antiinflammatory compound (especially CC AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-CC AAM48621) which comprises from 6-15 amino acid cresidues, fused to a NEWO binding sequence (AAM48525-AAM48619). The cresidues, fused to a NEWO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiarthritic, osteopathic, antibacterial, antiatherosclerotic, virucide and antiallergic activity. The compounds car as selective inhibitors of cytokine-mediated NFKAPAPB activation by act as selective inhibitors of cytokine-mediated NFKAPAPB activation by act as selective inhibitor of cytokine-mediated NFKAPAPB activation by act as selective inhibition of IKKAPAPB. The compounds are useful companiant inflammatory disorders, e.g. asthma, lung inflammatory disorders, e.g. asthma, lung inflammatory concer, psoriasis, rheumatory disorders, e.g. asthma, inflammatory concer, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory concer, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis, viral infections; and ataxia telanglecterala. The compounds are also cuteful for treating pro-inflammatory responses such as allergies, cuticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, cutorian, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                       ö

The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vascullitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             NEMO binding domain; NBD; I kappa B kinase beta; IKKbeta; antinflammatory; antiasthmatic; antipsoriatic; antinflammatory; antiasthmatic; antibacterial; immunosuppressive; dermatological; neutoprotective, cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriaals; rheumatory anti-inflammatory; inflammatory disorder; asthma; inflammatory bowel disease; sepsis; vacculitis; autoimmune disease; inflammatory bowel disease; multiple sclerosis; ancer; osteoporosis; Systemic lupus erythematosus; multiple sclerosis; cancer; osteoporosis; Alzheimer, a disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;

continflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, continflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, continuation antiarchitic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclarotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappas activation by blocking interaction of Ikappas kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation by subsequent decreased phosphorylation of Ikappas. The compounds are useful contracting inflammatory disorders, e.g. asthma, lung inflammatory concert, psoriasis, rheumatoid arthritis, osteoparthritis, inflammatory bowel disease, sepais, vasculitis, burstis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; and ataxia telangicetasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, curring arthritis, drug or food sensitivity, eczema, dermatitis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; antirheumatic; antiartheroactic; antimunosuppressive; dermatological; neuroprotective; antiatheroacteric; antial-lergic; membrane translocation domain; NEWO binding domain; eczeme; cytokine; NPKappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatorid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                               compound is useful for diagnosing or treating inflammatory disorders, enton as aethma, portlais, rheumatorid arthritis, osteoatthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune disease (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alabaimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiatthritic; osteopathic; antibacterial; virucide; immunosuppressive; dertantological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; ezzema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                               The invention describes an anti-inflammatory compound comprising (I). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AMM48627 or AAM48646-AAM48651) which comprises from 6-15 amino acid
        asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease cancer, comprises a membrane translocation domain and a NEMO binding
                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                             ö

The invention relates to an antiinflammatory compound (especially AAM48645). comprising a membrane translocation domain (AAM48620-AAM48651) which comprises from 6-15 amino acid AAM48627 or AAM48651) which comprises from 6-15 amino acid cantiinflammatory compounds have antiasthmatic, cytostatic, antipscriatic, antiarthratic, osteopathic, antibacterial, antiartherosclerotic, antiarthratic, osteopathic, antibacterial, antiartherosclerotic, virucide and antiallargic activity. The compounds cantiatherosclerotic, virucide and antiallargic activity. The compounds cantiatherosclerotic, virucide and antiallargic activity. The compounds cantiatherosclerotic, imminosuppressive, dermatological, neuroprotective, noorcopic, or act as selective inhibitors of cytokine-mediated NFkappaB at the NEMO binding committed interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding comman that results in inhibition of IKAppaB. The compounds are useful subsequent decreased phosphorylation of IKAppaB. The compounds are useful concert, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory concert, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory concert, psoriasis, vasculitis, bursitis, autoimmune diseases such as curing and ataxia telanglectasia. The compounds are also curicatia, anaphylaxis, drug or food sensitivity, eczema, dermatitis, curing and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiathritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NRkappaB, IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alcheimer's disease, atherosclerosis; viral infection;

The invention relates to an antiinflammatory compound (especially AAM48620-CC AAM48628-AAM4861) which comprises from 6-15 amino acid AAM48625-AAM4861) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48825-AAM48619). The residues, fused to a NEWO binding sequence (AAM48825-AAM48619). The casidues, fused to a NEWO binding sequence (AAM48825-AAM48619). The casidues, antiarthritic, osteopathic, antibacterial, antiarthritic, osteopathic, antibacterial, antiarthritic, osteopathic, antibacterial, antiarthritic osteopathic, antibacterial, antiarthritic of compounds antibacterial antibacosclerotic, virucide and antiallergic activity. The compounds antibacterial antib
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatheroscitac; antiallergic; membrane translocation domain; NEMO binding domain; eczema; antiallergic; membrane translocation domain; NEMO binding domain; eczema; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple soletosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
fused to NEMO binding sequence, useful for blocking nuclear factor kappaB
activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The compound is useful for diagnosing or treating inflammatory disorders, enton as asthma, portlass, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune disease, systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Albaimer, disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiarthritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroprofective, cycostatic; noctropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatoid arthritis; osteoarthritis; automane disease; sepsis; vasculitis; autoimmune disease; systemic luque erythematosus; multiple sclerosis; cancer; osteoporosis; slatemier's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;
                                                                                                                                                                                                                                                                                                   New compound for diagnosing or treating inflammatory disorders, e.g. asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease or cancer, comprises a membrane translocation domain and a NEMO binding

                                                                                                                                                                                                                                                                                ö
                                                                                                                                The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepais, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiarthritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroporotective; cyrostatic; nostropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatord arthritis; osteoarthritis; atthma; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; sepsis; vasculitis; autoimmune disease; sepsis; variation arthritis; osteoporosis; asthmaic lupus erythematosus; multiple sclerosis; cancer; osteoporosis; altainer's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;
                                                      New compound for diagnosing or treating inflammatory disorders, e.g. asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease or cancer, comprises a membrane translocation domain and a NEMO binding

                                                                                                                                                                                                                                                                                  The invention describes an anti-inflammatory compound comprising (I). The
                                                                                                                                                                                                                                                                                                                compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, alzheimer's disease or viral inflection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       NEMO binding domain; NBD; I kappa B kinase beta; IKKbeta; antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiasthmatic; antibacterial; immunosupressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatoid arthritis; osteoarthritis; notoimmune disease; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; sepsis; vasculitis; attoimmune disease; Alzheimer, a disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;

                                                                                                                                                                                                                             ð
                                                                                                                                                                       ö
                   The invention describes an anti-inflammatory compound comprising (1). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alaheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AMM48629-AAM48645), comprising a membrame translocation domain (AAM48620-AAM48627), comprising a membrame translocation domain (AAM48620-AAM48645), comprising a membrame translocation domain (AAM48620-AAM48627) or AAM48651) which comprises from 6-15 amino acid residues, fueed to a NEMO binding sequence (AAM48525-AAM48619). The antinitlammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antinitlammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antinitlammatory dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKCpeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Antinflammatory, antiasthmatic; cytostatic; antipsoriatic; nootropic; anticheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczeme; cytokine; NFkappaB; IkappaB kinase beta; IKWoeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
         autoimmune diseases (e.g.
inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          invention relates to an antiinflammatory compound (especially

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48637) or AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammarory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antipsorthitic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; attiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclarotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NRKappaB; KkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                               ö
for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis; autocimmune diseases such as bowel disease, sepsis, vasculitis, bursitis; autocimmune diseases such as tupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis
                                                                                                                                                                                                                                                                                                   Gaps

blocking interaction of IkappaB Kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IkappaB The Campounds are useful subsequent decreased phosphorylation of IkappaB. The compounds are useful subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or bowel disease, sepsis, rheumatoid arthritis, osteoarthritis, inflammatory inpus, polymyalgia, rheumatoid arthritis, osteoarthritis, inflammatory transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; ursticaria, and ataxia telangiactasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, uriticaria, anaphylaxis, duug or food sensitivity, eczema, dermatitis, enhance anaphylaxis, duug or food sensitivity, eczema, dermatitis, enhance anaphylaxis, duug or food sensitivity, eczema, dermatitis,

The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer: disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFAB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoathritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis,

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48621) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antirheumatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, darmatological, neuroprotective, nootropic, immunosuppressive, darmatological, neuroprotective, nootropic, or as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding subsequent decreased phosphorylation of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory
                                                                                                                                                           ö

The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, poortasis, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence
                                                                                                                                                                                                                     ö
bowel disease, sepsis, vasculitis, bursitis; autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infections; and ataxia telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     NEMO binding domain; NBD; I kappa B kinase beta; IKKbeta; antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiarthritic; osteopathic; antibacterial; immunosuppressive; dermacological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatory atthitis; osteoarthritis; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; sepsis; valtiple sclerosis; cancer; osteoporosis; Alzheimer, s disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;

The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB08725-ABB08742) comprising at least one NEWO binding domain (ABB77313). The compound has acts through selective inhibition of cytokine-mediated NF-kB activation by blocking the interaction of NEWO with IKKDeta at the NEWO binding domain. Blockage of IKKDeta-NEWO interaction results in inhibition of IKKDeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compound may also act (directly or indirectly) by blocking the recruitment of leukocytes into sites of acute
                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting a cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                                                                                                                                                                  IKKDeat; IKKalpha; NEMO; NEMO binding domain; NBD; NF-kappaB; NF-kB; kinase activation; leukocyte; inflammation; B-selectin; osteoclast; autoimmune disease; transplant rejection; osteoporosis; cancer; Alzheimer's disease; viral; infection; asthma; anaphylaxis; psoriasis; rheumatoid arthritis; Crohi's disease; multiple sclerosis; HIV; corticosteroid; immunosuppression; antinflammatory; immunosuppressive; osteopathic; cytostathic; nootropic, neuroprotective; anti-HIV; human; antiarteriosclerotic; virucide; antiasthmatic; antiallergic; dermatological; antibacterial; antipsoriatic; antiallergic; antiarthritic; osteopathic; antiulcer; mutant; mutein.
                                                                                                                         Gaps
of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                           ö

and chronic inflammation, by down-regulating the expression of E-selectin on leukocytes or by blocking osteoclast differentiation. The compound is useful in treating NF-RB mediated conditions, where the condition is an inflammatory disorder, an autoimmune disease, transplant rejection, osteoporosis, cancer, Alzheimer's disease, transplant rejection, costeoporosis, cancer, Alzheimer's disease, transplant rejection, costeoporosis, cutaneous inflammatory disorder is asthma, allergies, urricaria, anaphylaxis, cutaneous inflammatory, sepsis, cutaneous inflammatory disease, chronic obstructive pulmonary disease, chronic obstructive pulmonary disease, vasculitis and bursitis. The inflammatory disorder may also be considered to the compound matory bolymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, polymyalgia, scleroderma, Wegner's granulomatosis, temporal arteritis, caused by Epstein-barr, cytomegalovirus or herpes simplex. Other viral infections caused by Epstein-barr, cytomegalovirus or herpes simplex. Other viral diseases include HIV and influenza. The compound may also be useful for treating anaphylaxis, drug and food sensitivity, context dermatitis, any application in which corticosteroids are used, including inmunosuppression in transplants and cancer therapy. Also for identifying antiinflammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEMO catilining domain of IKKbeta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       IKKDeat; IKKalpha; NEWO; NEMO binding domain; NBD; NF-kappaB; NF-kB; kinase activation; leukocyte; inflammation; E-selectin; osteoclast; autoimmune disease; transplant rejection; osteoporosis; cancer; Alzheimer's disease; viral; infection; asthma; anaphylaxis; psoriasis; rheumatoid arthritis; Crohn's disease; multiple sclerosis; HIV; corticosteroid; immunosuppression; antiinflammatory; immunosuppressive; osteopathic; cytostatic; nootropic; neuroprotective; anti-HIV; human; antiarteriosclerotic; virucide; antiasthmatic; antiallergic; dermatological; antibacterial; antisporiatic; antiallergic; antiarthritic; osteopathic; antiulcer; mutant; mutein.

The invention relates to modulating NF-kappaB (NF-kB) induction in a cell comprises contacting a cell with an anti-inflammatory compound (ABB08725-Compound has acts that least one NEMO binding domain (ABB7131. The compound has acts through selective inhibition of cytokine-mediated NF-kB compound has acts through selective inhibition of cytokine-mediated NF-kB compound has blocking the interaction of NEMO with IKKbeta at the NEMO binding domain. Blockage of IKKbeta-NEMO interaction results in cinhibition of IKKbeta kinase activation and subsequent decreased compound may also act (directly or indirectly) by blocking the recruitment of leukocytes into sites of acute condition of Inflammatory disorder. All administration or activation of an elukocytes or by blocking osteodlast differentiation. The compound is useful in treating NF-kB mediated conditions, where the condition is an inflammatory disorder. All allegases, transplant rejection.

Con leukocytes or by blocking osteodlast differentiation, septism, osteoporosis, cancer, Alabeimer's disease, transplant rejection, or ataxia telangiectasia. The inflammatory disorder is asthma, infection or ataxia telangiectasia. The inflammatory disorder is asthma, coreaction or ataxia telangiectasia. The inflammatory disease, inflammatory bowel disease, chronic obstructive pulmonary disease, inflammatory bowel disease, chronic obstructive pulmonary disease, or and spondylarthritis. Also for Crohn's disease, ulcerative colitis, and spondylarthritis. Also for Crohn's disease, ulcerative colitis, cryoglobulinaemia or multiple sclerokies. Por chronic viral infections cryoglobulinaemia or multiple sclerokies. The compound may also be cryoglobulinaemia or multiple sclerokies. School scho
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                immunosuppression in transplants and cancer therapy. Also for identifying antinfilammatory compounds and for diagnosis of an inflammatory disorder. The compound may be administered alone or in combination with other known anti-inflammatory agents. The present sequence is that of a mutated NEMO binding domain of IKKbeta
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatheroseclerotic; antiallergic; membrane translocation domain; NEWO binding domain; eczema; cytokine; NFKappaB; IkappaB kinase beta; IKWoeta; cancer; psoriasis;
                                                                                                                                                 Modulating NF-kappaB induction in a cell, useful for treating e.g. inflammatory disorders, osteoporosis and cancer, comprises contacting a cell with an anti-inflammatory compound comprising at least one NEMO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

AMM48628-AAM48645), comprising a membrane translocation Gomain (AAM48620-AAM48629). Comprising a membrane translocation Gomain (AAM48627 or AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEWO binding sequence (AAM48525-AAM48619). The cantinifanmatory compounds have antisthmatic, cytostatic, antipsoriatic, antiarthritic, osteopathic, antibacterial, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, contiatheroscleratic, ovincuide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFKappaB activation by conting interaction of IkappaB kinase beta (IKKbeta) at the NEWO binding act results in inhibition of IKKDeta in the Compounds are useful committee in inhibition of IkappaB. The compounds are useful subsequent decreased phosphorylation of IkappaB. The compounds are useful correct, psoriasis, rheumatory disorders, e.g. asthma, lung inflammation or concer, psoriasis, rheumatory disorders, e.g. asthma, lung inflammatory disorders, e.g. asthma, lung inflammatory compounds are useful concer, psoriasis, vasculitis, burstiss, autoimmune diseases such as linfection; osteoporosis; Alzheimer's disease; atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; cuseful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, cubmburn, aging and arthritis
             immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatolid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
antirheumatic; antiarthritic; osteopathic; antibacterial; virucide;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            invention relates to an antiinflammatory compound (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 83.3%; Score 5; DB 5; Length 6; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to an antiinflammatory compound (especially AMM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48621) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipproriatic, antiathratic, osteopathic, antibacterial, immunosuppressive, darmatological, neuroprotective, nootropic, antiatheroselerotic, virucide and antiallergic activity. The compounds car as selective inhibitors of cytokine-mediated NFKAPABBB activation by blocking interaction of IkappaB kinase beta (IKKDeta) at the NEMO binding companient decreased phosphorylation of IkRDeta kinase activation and subsequent decreased phosphorylation of IKRDeta kinase activation or consecuted disease, sepsis, rheumatoid arthritis, osteoarthritis, inflammatory concer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory concer, polymyalgia, vasculitis, bursitis, autoimmune diseases such as clupus, polymyalgia, soleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; usfelu for treating pro-inflammatory responses such as allergies, usfelul for treating pro-inflammatory responses such as allergies, custicaria, anaphylaxis, during or food sensitivity, eczema, dermatitis, concernance and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

NBD mutant peptide SEQ ID NO 4.

20-MAR-2002 (first entry)

```
The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-MAM48646-AAM48646-AAM48651) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48528-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiinflammatory compounds have antiasthmatic, antibacterial, antipsoriatic, antinencosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NPkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding domain that results in inhibition of IKKbeta kinase activation and subsequent decreased phosphorylation of IkappaB. The compounds are useful
                                                                                       antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermacological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NPKappaB; ikappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autofmmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       for treating inflammatory disorders, e.g. asthma, lung inflammation or cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis, transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis, viral infections, and ataxia telangisctasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis,
                                                                   Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 83.3%; Score 5; DB 5; Len

The invention relates to an antiinflammatory compound (especially AAM48628-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48651) comprises from 6-15 amino acid residues, fised to a NRMO binding sequence (AAM4852-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds act as selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKAbpta) at the NEMO binding commit that results in inhibition of IKAppaB. The compounds are useful common that results in inhibition of IKAppaB. The compounds are useful subsequent decreased phosphorylation of IKAppaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammatory bowel disease, sepsis, vasculitis, burstis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; vasculitis, burstis, autoimmune diseases such as lupus, polymyalgia, acleroderma, granulomatosis, multiple sclerosis; viral infections; and ataxia telanglectasia. The compounds are also unticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, autoimmune diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gape
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò

The invention relates to an antiinflammatory compound (especially CC AAM46645), comprising a membrane translocation domain (AAM46620-AAM46645), comprising a membrane translocation domain (AAM46620-AAM46645), comprising by the compounds from 6-15 amino acid cresidues, fused to a NEWO binding sequence (AAM46655-AAM46619). The cresidues, fused to a NEWO binding sequence (AAM46655-AAM46619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiarthratic, osteopathic, antibacterial, antiatherosclerotic, virucide and antiallergic activity. The compounds antiatherosclerotic, virucide and antiallergic activity. The compounds care as selective inhibitors of cytokine-mediated NFRAPAPBA activation by act as selective inhibitors of cytokine-mediated NFRAPAPBA activation by act as selective inhibitors of Cytokine-mediated NFRAPAPBA activation by act as selective inhibitors of Cytokine-mediated NFRAPAPBA activation by concern that results in inhibition of IKKDeta kinase activation and consequent decreased phosphorylation of IKKDeta kinase activation and concern, psoriasis, rheumatory disorders, e.g. asthma, lung inflammatory cancer, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory concern, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; cransplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, cubmurn, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                      Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; antirheumatic; antiarthricy osteopathic; antibacterial; virucide; antiallery defendant of the mantiallery antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFKappaB; IKappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ghosh S, Findeis MA, Phillips K;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Example 6; Page 47; 88pp; English.
                   AAM48510 standard; peptide; 6 AA.
                                                                                                                                                           NBD mutant peptide SEQ ID NO 5.

                                                                         AAM48510;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     May MJ,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              (UYYA)
AAM48510
```

```
The invention relates to an antiinflammatory compound (especially AAM48645), comprising a membrane translocation domain (AAM48620-CC AAM48645), comprising a membrane translocation domain (AAM48620-AAM48621) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48625-AAM48619). The cresidues, fused to a NEMO binding sequence (AAM48625-AAM48619). The cresidues, antiarthritic, osteopathic, antibacterial, controping of cytokine-mediated NFRappas activation by act as selective inhibitors of cytokine-mediated NFRappas activation by act as selective inhibitors of tropic act as inhibitors of cytokine-mediated NFRappas activation by act as selective inhibitors of IKAPpas Aimsse activation and command disease and inhibition of IKAPpas Hanse activation and commander of disease and arthritis, osteoparthritis, inflammatory as bowel disease, sepsis, vascultis, burstitis, adicamenting infections; and ataxia telanglectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, comburn, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                        Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; attiatthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFRappaB, IKappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Phillips K;
                                                                                                                                                                                                                            Anti-inflammatory peptide SEQ ID NO 39.
                                                                                                           AAM48536 standard; peptide; 6 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 6; Page 61; 88pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    May MJ, Ghosh S, Findeis MA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       02-MAY-2001; 2001WO-US014346.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                02-MAY-2000; 2000US-0201261P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  22-AUG-2000; 2000US-00643260.

The present invention relates to antinflammatory compounds comprising MEMO binding domains are found on IkappaB kinase-beta (IKKbeta) and IkappaB kinase-alpha (IKKapha) poptides. The NEMO binding domains are found on proteins. The antiinflammatory compounds of the invention are useful for modulating nuclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKs such as IKKalpha or IKKbeta, and NEMO. The antiinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating inflammatory disorders, autorimmune diseases, osteoporosis, cancer, Alzheimer's disease, atherosclerosis, viral infections, Ataxia telangiectasia, and for transplantation detection. The compounds of the invention block NF-kappaB induction by IKK but do not inhibit the basal activity of NF-kappaB. ABU08418-ABU08413 represent human NBD mutant peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel antiinflammatory peptide compounds comprising NEWO binding domain, useful for modulating NF-kappaB induction in a cell and for treating NF-kappaB-mediated inflammation disorders e.g., asthma, psoriasis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to antinflammatory compounds comprising MEMO binding domain (MBD) peptides. The NEMO binding domains are found on IkappaB kinase-beta (IKKDeta) and IkappaB kinase-lapha (IKKJeta) and IkappaB kinase-lapha (IKKJeta) and IkappaB kinase-lapha (IKKJeta) madulating muclear factor-kappaB (NF-kappaB) induction in a cell, where the compounds are capable of blocking the interaction between one or more IKKS such as IKKAlpha or IKKDeta, and NEMO. The antinflammatory compound further comprises at least one membrane translocation domain. The compounds are useful for treating inflammatory disorders, autoimmune diseases, osteoporosis, cancer, Alzheimer's disease, atherosclerosis, viral infections. Ataxia telangiectasia, and for transplantation detection. The compounds of the invention block NF-kappaB induction by IKK but do not inhibit the basal activity of NF-kappaB. ABU08418-ABU08431 represent human NBD mutant peptides
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel antinflammatory peptide compounds comprising NEMO binding domain, useful for modulating NF-kappaB induction in a cell and for treating NF-kappaB-mediated inflammation disorders e.g., asthma, psorlasis, vasculitis.
                                                                                                                                                                                                                                                                   Human; antinflammatory compound; NEMO binding domain; NBD; IKKDeta; IkappaB kinase-alpha; IKKAlpha; NF-kappaB; nuclear factor-kappaB anduction; inflammatory disorder; autoimmune disease; osteoporosis; cancer; Alzheimer's disease; atherosclerosis; viral infection; Ataxia telangiectasia; transplantation detection; immunosuppressive; osteopathic; cytostatic; noortropic; neuroprotective; antiatherosclerotic; virucide; vasotropic; antiatheumatic; antiarthritic; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, espsis, vascullitis, autoimmune diseases (e.g. systemic lupus errthematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence is I kappa B kinase beta (IKKbeta) NEMO binding domain (NBD) mutant used in to determine which residues in the NBD are important for binding NEMO (necrosis factor kappa B essential modulator).

                                                                                                                                                                                                                                                                                           The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).

The invention describes an anti-inflammatory compound comprising (I). The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFkB) essential modulator (NEMO).
NEMO binding domain; NBD; I kappa B kinase beta; IXKbeta; antinflammatory; antiasthmatic; antiboriatic; antirheumatic; antianthritic; osteopathic; antibacterial; imminosuppressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatord arthritis; osteoarthritis; inflammatory bowel disease; sepsie; vaculitis; autoimmune disease; systemic lupus erythematosus; multiple sclerosis; cancer; osteoporosis; Alzheimer's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease cancer, comprises a membrane translocation domain and a NEMO binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          or treating inflammatory disorders, e.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as sathma, postiais, rheumatorid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer, disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFkB) essential modulator (NEWO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            NEMO binding domain; NBD; I kappa B kinase beta; IXXbeta; antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiathritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatoid arthritis; osteoarthritis; autoimmune disease; systemic lupus erythematosus; multiple sclerosis; cancer; osteopoxosis;

The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoathritis, inflammatory bowl disease, espsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of a I kappa B kinase beta (IKKbeta) NEMO binding domain (NBD) muteant used in to determine which residues in the NBD are important for binding NEMO (necrosis factor kappa B essential modulator).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NEWO binding domain, NBD, I kappa B kinase beta; IKKbeta; antinflammatory; antiaethmatic; antipsoriatic; antirheumatic; antiathritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatoid arthritis; osteoarthritis; autoimmune disease; inflammatory bowel disease; sepsis; vascullitis; autoimmune disease; inflammatory bowel disease; sepsis; vascullitis; autoimmune disease; Alzheimer's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
Alzheimer's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                       The invention relates to an antiinflammatory compound (especially CC AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-CC AAM48651) which comprises from 6-15 amino acid cresiduces, fused to a NEWO binding sequence (AAM48519). The cresiduces, fused to a NEWO binding sequence (AAM48519). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiatherosclerotic, virucide and antiallergic activity. The compounds are useful blocking interaction of Ixappas kinase beta (IKKbeta) at the NEWO binding combsequent decreased phosphorylation of IKKbeta kinase activation and for subsequent decreased phosphorylation of IKKbeta kinase activation or for treating inflammatory disorders, e.g. asthma, lung inflammatory cancer, psoriats, rheumatory disorders, e.g. asthma, lung inflammatory cancer, psoriats, rheumatorid arthritis, osteoarthritis, inflammatory cancer, psoriats, sepsis, vasculitis, burstitis, autoimmune diseases auch as useful cursically pro-inflammatory responses such as allergies, usfelul for treating pro-inflammatory responses such as allergies, cursically, anaphylaxis, dram a food sensitivity, eczema, dermatitis, curburni, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                        Novel antinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  NEMO binding domain; NBD; I kappa B kinase beta; IKKbeta; antinflammatory; antiasthmatic; antipsoriatic; antirheumatic; antiarthritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory inflammatory disorder; asthma; psoriasis; rheumatorid arthritis; osteoparthritis; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; systemic lupus erythematosus; multiple sclerosis; cancer; osteoporosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, sepsis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Alzheimer's disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NFKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              NEWO binding domain, NBD; I kappa B kinase beta; IKKbeta; antinflammatory; antiathmatic; antipsoriatic; antirheumatic; antiathmatic; antibsoriatic; antirheumatic; antiathritic; osteopathic; antibacterial; immunosuppressive; dermatological; neuroprotective; cytostatic; nootropic; virucide; gene therapy; anti-inflammatory; inflammatory disorder; asthma; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; sepsis; vasculitis; autoimmune disease; sinflammatory bowel disease; multiple sclerosis; cancer; osteoporosis; systemic lupus erythematosus; multiple sclerosis; cancer; osteoporosis; Alzheimer's disease; viral infection; NF-kappa B essential modulator; necrosis factor kappa B essential modulator.

                                                                                                                                                                                                                                                               The invention describes an anti-inflammatory compound comprising (I). The compound is useful for diagnosing or treating inflammatory disorders, such as asthma, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory bowel disease, seppis, vasculitis, autoimmune diseases (e.g. systemic lupus erythematosus), multiple sclerosis, cancer, osteoporosis, Albakimer, disease or viral infection. This is the amino acid sequence of an anti-iflammatory peptide that binds to, and down-regulates, necrosis factor kappa B (NPKB) essential modulator (NEMO).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autofimune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                         New compound for diagnosing or treating inflammatory disorders, e.g. asthma, psoriasis, rheumatoid arthritis, inflammatory bowel disease or cancer, comprises a membrane translocation domain and a NEMO binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic;

The invention relates to an antinflammatory compound (especially AMM48628-AMM48645), comprising a membrane translocation domain (AAM48629-AMM48645), comprising a membrane translocation domain (AAM48629-AMM48645) which comprises from 6-15 amino acid residues, tused to NEMO binding sequence (AAM48625-AAM48619). The antinflammatory compounds have antiasthmatic, cytostatic, antipporatic, osteopethic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallergic activity. The compounds cat as selective inhibitors of cytokine-mediated NFKAppaB activation by blocking interaction of IKappaB kinase beta (IKKDeta) at the NEMO binding domain that results in inhibition of IKQDeta kinase activation and subsequent decreased phosphorylation of IKADPBB. The compounds are useful cancer, psoriasis, rheumatory disorders, e.g. asthma, lung inflammatory disorders, e.g. asthma, lung inflammatory cancer, psoriasis, rheumatoid arthritis, osteoarthritis, inflammatory lung inflammatory solventy disorderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Altanamer's disease, atherosclerosis; cransplant rejection; osteoporosis; Altanamer's disease, atherosclerosis; cransplant rejection; osteoporosis; and the constant and ataxis elamatory and ataxis the compounds are also constant and ataxis and ataxis the compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Antinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; anticheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclarotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    useful for treating pro-inflammatory responses such as allergies, urticaria, anaphylaxis, drug or food sensitivity, eczema, dermatitis, sunburn, aging and arthritis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an antinflammatory compound (especially AAM48629-AAM48645), comprising a membrane translocation domain (AAM48620-AAM48627), comprising a membrane translocation domain (AAM48620-AAM48627), the seadules, fused to a NEMO binding sequence (AAM48625-AAM48619). The residues, fused to a NEMO binding sequence (AAM48625-AAM48619). The antinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiatheriotic, antiatheriotic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, noctropic, antiatherosclerotic, virucide and antiallergic activity. The compounds are a selective inhibitors of cytokine-mediated NFkappaB activation by blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding blocking interaction of IkappaB kinase beta (IKKbeta) at the NEMO binding commain that results in inhibition of IkappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammatory compounds are also useful for treating scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzaimer's diseases such as such a teamis at elangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, currically and attaxis telangiectasia. The compounds are also useful for treating pro-inflammatory responses such as allergies, currically and pro-inflammatory responses such as allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antirheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclerotic; antiallergic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NEKappaB; IKappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease; autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
                                                                                                                                                                                                                                                                                                                                     Novel antinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

The invention relates to an antiinflammatory compound (especially CC AAM48645), comprising a membrane translocation domain (AAM48620-AAM48645), comprising a membrane translocation domain (AAM48620-CC AAM48627 or AAM48645), which comprises from 6-15 amino acid cresidues, fused to a NEMO binding sequence (AAM48525-AAM48619). The cresidues, fused to a NEMO binding sequence (AAM48525-AAM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiarthritic, osteopathic, antibacterial, antiartherosclerotic, virucide and antiallergic activity. The compounds cat as selective inhibitors of cytokine-mediated NFKAPAPBB activation by allocking interaction of IxapaPB kinase beta (IKKAPeta) at the NEMO binding companies in inhibition of IXEQPEBS. The compounds are useful commain that results in inhibition of IXEQPEBS. The compounds are useful concer, psoriasis, rheumatory disorders, e.g. asthma, lung inflammatory concer, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory concer, psoriasis, rheumatorid arthritis, osteoarthritis, inflammatory concer, psoriasis, rheumatorid arthritis, aliesase; atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; cransplant anaphylaxis, drug or food sensitivity, eczema, dermatitis, curburn, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antiinflammatory; antiasthmatic; cytostatic; antipsoriatic; nootropic; antitheumatic; antiarthritic; osteopathic; antibacterial; virucide; immunosuppressive; dermatological; neuroprotective; antiatherosclarotic; antiallerstic; membrane translocation domain; NEMO binding domain; eczema; cytokine; NFkappaB; IkappaB kinase beta; IKKbeta; cancer; psoriasis; rheumatoid arthritis; osteoarthritis; inflammatory bowel disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psorlasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 0; Gaps

The invention relates to an antiinflammatory compound (especially AMM48629-AMM48645), comprising a membrane translocation domain (AAM48620-AMM48621) which comprises from 6-15 amino acid residues, fused to a NEMO binding sequence (AAM48629-AMM48619). The antiinflammatory compounds have antiasthmatic, cytostatic, antipsoriatic, antiarthritic, osteopathic, antibacterial, immunosuppressive, dermatological, neuroprotective, nootropic, antiatherosclerotic, virucide and antiallargic activity. The compounds cat as selective inhibitors of cytokine-mediated NFKappaB activation by blocking interaction of IxappaB kinase beta (IXKbeta) at the NEWO binding domain that results in inhibition of IXkbeta kinase activation and subsequent decreased phosphorylation of IXappaB. The compounds are useful for treating inflammatory disorders, e.g. asthma, lung inflammatory concern, sepais, vasculitis, bursitis, autoimmune diseases such as lupus, polymyalgia, scleroderma, granulomatosis, multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; unseful for treating pro-inflammatory responses such as allergies, useful for treating pro-inflammatory responses such as allergies, useful for treating and athala talanglectasia. The compounds are also unticaria, anaphylaxis, duug or food sensitivity, eczema, dermatitis, subburn, aging and arthritis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel antiinflammatory compound comprising membrane translocation domain fused to NEMO binding sequence, useful for blocking nuclear factor kappaB activation, and for treating asthma, lung inflammation, psoriasis.
autoimmune disorder; multiple sclerosis; transplant rejection; osteoporosis; Alzheimer's disease; atherosclerosis; viral infection; ataxia telangiectasia; allergy; anaphylaxis; arthritis.
